SEZ DK a. s.

Our company SEZ DK a.s. was founded in 1947 as one of the first plants given in the field of industrialization. Thanks to a long tradition, experience and state-of-the-art technology in the field of electrical installation production, we have long maintained our position as a leader in the countries of Central Europe.

MARKET LEADER

Among the countries of Central Europe, we have maintained our position as a market leader in the production of electrical installation materials.

MEMBER OF FPD GROUP

We have been a member of the FPD Group since 2009. The investors' priority was the renewal of the technology park and the introduction of a modern management system.

PRODUCTION FACILITIES

Our production facilities cover an area of 50 569 m². Within our production capacities, we cooperate with verified, renowned brands.

SERVICES

We use our own development to develop products.

Our R&D department and tool shop ensure the construction and production of press moulds and mechanical tools. Our portfolio also includes a press, galvanization plant, metal production and assembly.

ISO CERTIFICATION

We were awarded organisational management system certification according to ISO 9001, EN ISO 9001: 2015.

EXPORT

We supply products that bear our brand to more than 25 countries around the world. Our export activities comprise up to 70 % of our total production.

INDUSTRIAL SOCKETS AND PLUGS

INDUSTRIAL SOCKETS AND PLUGS

Our industrial plugs and sockets have been designed to connect electrical devices and consumers to low voltage in a broad spectrum of human activities. They are frequently applied in civil engineering, electric assembly sector, engineering industry and other sectors of the economy.

TECHNICAL PARAMETERS:

- nominal current: 16 A, 32 A, 63 A, 125 A,
- nominal voltage: 110 V, 230 V, 400 V, 500 V,
 - nominal frequency: 50 Hz and 60 Hz,
- degree of protection: IP 44, IP 54, IP 67,
 - number of poles: 3P (2P+PE),
 - 4P (3P+PE),
 - 5P (3P+N+PE),
- operating temperature: -25 °C to +55 °C.

Our sockets, plugs and connectors are manufactured under the STN EN 60309 – 1, 2, 4 norms which comply with European norms EN 60309 – 1, 2, 4 and international recommendation IEC 60309 – 1, 2, 4.

QUALITY FIRST

The construction of our devices respects the demands on their strong reliability and durability as well as the requirements of health protection. In a short preview we summarise the fundamental security principles, which will be appreciated by all users of our industrial sockets and plugs.

INSULATION RESISTANCE AND DIELECTRIC STRENGTH OF THE DEVICES MUST BE SUFFICIENT

Tests are carried out to check the fulfilment of these requirements which immediately follow after the tests in the humidity chamber or room where the testing samples have been adjusted to prescribed temperature. Insulation resistance is measured by the voltage of approximately 500 V; the measuring begins one minute after the voltage has been applied. The insulation resistance must not be lower than 5 MOhm. Dielectric strength is measured by the 50 Hz/60 Hz frequency sinusoid voltage of 2 000 V (2 500 V respectively, for the devices with the nominal voltage of 500 V), which is applied for 1 minute. Neither flash-over nor breakdown must appear during the test.

NON-BLOCKED DEVICES MUST HAVE ADEQUATE DISCONNECTING CAPACITY

A plug or a mobile socket is inserted into a built-in (wall) socket or a connecting built-in appliance, inlet (wall inlet) and subsequently pulled out with the frequency of 7,5 strokes per minute. The electric contact is maintained for not longer than 4 seconds and not shorter than 2 seconds. There are 50 cycles set for the 16 A and 32 A devices, 20 cycles for 63 A and 125 A devices, respectively. The samples are tested at the 1,1 level of Surface treatment contacts; and 1,25 level of nominal current values and line current factor 0,6. A persistent arc must not appear during testing. When tested, the samples must not show any damage that would disable their further operation and plug pin inlets must not show any serious damage either. Our 63 A and 125 A sockets and plugs maintain sufficient switching capacity, their electrical blocking by a control (pilot) contact is therefore unnecessary.

NORMAL OPERATION

The devices must be resistant to the effects of mechanical, electric and heat stress which may appear during normal operation without any excessive wear or other damaging effects. The non-blocked devices tested as described in Point 2 above are further tested in the following cycles:

- devices 16 A – 5000 cycles under load only.
- devices 32 A and 63 A – 1000 cycles under load, 1000 cycles unloaded.
- devices 125 A – 250 cycles under load, 250 cycles unloaded.
- loading condition: load of nominal voltage and nominal current under line current factor 0,6.

After test the samples must not show:

- any wear preventing further operation of the device and its possible blocking, respectively.
- any damage of cover or barriers.
- any damage of plug pin inlets which could cause malfunction.
- any loosening of electric or mechanical connections.

WARNING – Disconnecting capacity is required as protection in case of accidental insertion or release of a plug under load. According to STN 33 2180, industrial sockets and plugs are not designed for the operational switching on and off of electrical appliances.

MECHANICAL RESISTANCE

Dismantling devices are equipped with the lightest type of power supply cable of the smallest suitable cross-section. They are then frozen at the temperature of -25 °C. Subsequently, the free end of the 2,25 metre-long cable is attached to the wall at 75 cm over the ground. The sample is held so that the cable remains in horizontal position and then is dropped onto the concrete floor. The process is repeated eight times, while the cable is twisted of 45° in the point of attachment before each trial. After tests the samples must not show any damage, chiefly, none of the parts may be loosened or separated.

HEAT AND COMBUSTION RESISTANCE

Parts made of insulation material are tested by static burden by an appropriate testing device. The surface of tested parts is placed in horizontal position and a steel ball with 5 mm diameter is pressed into that surface with the force of 20 N.

Testing takes place in a heat chamber at the temperatures of:

- 125 °C for parts which carry the live parts of dismantling device.
- 80 °C for other parts.

The ball is removed after one hour and the diameter of the impression is measured. If the material has been deformed, the diameter must not exceed 2 mm.

The external parts of insulation material and insulation parts that carry the live parts of device must be resistant to excessive heat and combustion. The hot wire test, described in IEC 60695-2-1, is used to check if this requirement is fulfilled.

The temperature of hot wire is:

- 650 °C for insulation material parts not needed to keep the conducting parts and protection circuit parts in their position even though they touch them.,
- 850 °C for insulation material parts needed to keep the conducting parts and protection circuit parts in their position.

The contact lasts 30 seconds.

A device passed the hot wire test, if:

- neither perceivable flame nor permanent heating had appeared or the flame or the heating of the sample or its surroundings ceased within 30 seconds after the hot wire had been removed and the surrounding parts did not burn completely.

THE RESISTANCE OF RUBBER AND THERMOPLASTIC TO AGEING

The devices with rubber or thermoplastic covers and elastomeric parts, such as joint rings and washers, must show sufficient resistance to ageing which is checked by accelerated ageing test in the atmosphere with normal air composition and pressure. The samples hung freely in a heat chamber with the natural circulation of air.

The chamber temperature and test duration are as follows:

- 70 °C and 10 days for rubber.
- 80 °C and 7 days for thermoplastic.

The samples are examined after the chamber has been cooled to standard room temperature. No cracks may be visible to the naked eye and the surface must not be sticky or greasy. The samples must not show any damage which would lead to the failure of standard requirements.

The design of the devices ensures that the devices with different working voltages are not interchangeable. The working voltage of a device is determined by the position of the key groove and the protective contact, the so-called hour angle, when the key groove is always in the position of 6 hours. The figure of the hour angle is derived from the position of the protective contact compared to the clock face, the socket being observed from the front. To prevent fault connection, the socket is fitted with a key groove, while the plug is fitted with a key. The diameter of protective pin is different from that of phase pin, wrong insertion is therefore completely excluded.

THE INSTALLATION OF SOCKETS AND CONNECTORS ON FLAMMABLE SURFACES

To meet the requirements of STN 33 2312, sockets and inlets cannot be installed directly on flammable or easily combustible surfaces. It is necessary to separate them from such surfaces by a non-flammable, heat-insulating plate at least 5 mm thick, protruding at least 10 mm on each side, or they must be installed in at least 30 mm distance from the flammable surface, e.g. on consoles in accordance with STN 33 2312.

Dimensioning of connecting terminals

Socket system IEC (A)	Motor output (kW)		Connecting terminals for conductor (mm ²)	
	400 V	500 V	mobile wiring flexible conductor	fixed wiring rigid conductor
16	7	9	1 - 2,5 Cu	1 - 4 Cu/Al
32	15	20	2,5 - 6 Cu	2,5 - 10 Cu/Al
63	30	40	4 - 16 Cu	6 - 25 Cu/Al
125	60	80	16 - 50 Cu	16 - 70 Cu/Al

kW data are approximate

In 63 A devices we have widened the assortment by the 5-pole appliances in protection IP 67 whose shape is adjusted to 16 A and 32 A series. They are distinguished from the IP 44 versions by the letter G., i.e. cable sockets ISGN, cable plugs IVGN, wall sockets IZGN, wall inlets IPGN, panel sockets IEGN, panel inlets IRGN and panel inlets straight IRRGN. The authentic technical solutions of the connecting terminals and the cable fixing and its sealing have been used also in these sockets and plugs.

REVERSING ADAPTERS, ADAPTERS

Reversing adapters "RA" 32 A and 16 A providing the change of the phase sequence and the adapter "A" from 5-pole socket into a 4-pole socket have been added to the range of goods of our production. Its use is allowed on the symmetric load since the 4-pole socket has the 3P + PE type of connection.

PANEL SOCKETS, PANEL INLETS ANGLED, STRAIGHT, REVERSE

All appliances in this product group 16 A and 32 A, in versions 3P, 4P, 5P, 6h are exceptional in that they use a uniform mounting base with external dimensions of 75x75 mm for mounting on the panel as well as a common spacing of mounting holes 60 x 60 mm which simplifies and unifies their assembly and interchangeability. The terminal parts are identical to other sockets and plugs.

WALL SOCKETS WITH BOX UNDER PLASTER

The IZV socket will find its scope and use in the tidy-looking interiors above all, where the emphasis is put on the accurate implementation and a decent presence of industrial sockets. The box embedded in the plaster is common for all of the types. 6 openings for conductor inputs are situated on the box – 4 of them of oval shape on the side walls and 2 of round shape on the bottom of the box. The boxes can be connected in a row of any length by the connecting element PR-10 interacting with special protrusions on the boxes.

WALL SOCKETS-COMBINED

Our new product of a type designation IZVZ combines 400 V and 230 V socket in one product. It finds its use in all the cases when the situation calls for a simultaneous connection of a single-phase and three-phase device. A special emphasis was put on the electric capability, safety and user-friendliness in course of the development of the device. IZVZ is supplied on the market in the cover of IP 44 and in versions 16 A 4P (IZVZ 1643), 16 A 5P (IZVZ 1653). The 32-ampere variants (IZVZ 3243, IZVZ 3253) are delivered with a case for a tube fuse 16 A for single phase 230 V/16 A socket safety.

INDUSTRIAL PLUGS AND SOCKETS 125 A

In 2008 we added into our range of products the following products: industrial plugs, inlets and sockets of current 125 A in 3, 4, 5 poles with voltage 110 V, 230 V, 400 V and 500 V in protection IP 67.

NEW SERIES OF 16A/230 V, 3P INDUSTRIAL PLUGS, SOCKETS AND INLETS

Our production portfolio has been completed by the newly developed industrial plugs and sockets under Types IVN, ISN, IZN, IPN, IRRN, IERN with the nominal current of 16 A, 3 P, 230 V.

SCREWLESS SERIES

Company SEZ DK expanded its assortment in new screwless range 16 A and 32 A – 5-poles industrial sockets and plugs IVB, ISB, IZB, IPB, IEB, IERB, IRRB (letter B means screwless).

Generally, the system of screwless terminal can be solved in many ways and our system uses the principle of a spring terminal, featuring a screwless spring clamp which allows to connect rigid conductors up to cross section 4 mm² in 16 A appliances and flexible wires up to 2,5 mm². In 32 A the cross section are 10 mm² for rigid and 6 mm² for flexible wires respectively. Connection of male or female pin with holder of spring clamp is realized by a special orbital riveting. Successful implementation of this technical principle we achieved firm and fast connection with no further need of continuous control of connection quality and safety during its use.

New technical solution markedly shortens time of montage in 39 % in compare with screw sockets and plugs. Reduction of this time is achieved that covers of plugs and sockets are in transport unlocked position (opening without using of screwdriver) and also plugs, inlets and sockets contacts are delivered in open position (operating levers are detached) and after putting of stripped wire (rated length is 12 mm) you just to push the operating

levers down and the wire is fastened. Particular operating levers are distinguished by respective colours and together with the indicative marking on the plastic body the chance of a wrong connection of individual wires is minimalized.

PILOT CONTACTS

Plugs and sockets with nominal current 125 A are offered also with pilot contacts. They are placed in the middle of socket and they interrupt input by the contactor from the network during pulling the plug out. Contacts are disconnected without current and there is no burning on them.

DEGREE OF PROTECTION IP

Stated in the catalogue our plugs and sockets with the nominal current 16 A, 32 A, 63 A meet the degree of protection of IP 44, IP 54 or IP 67 and 63 A, 125 A reach IP 67 in compliance with STN EN 60529.

The degree of protection is tested:

- on the sockets themselves and also in their coupled position.
- on plugs and inlets after their full coupling with the corresponding sockets.

IP xx

Protection against solid bodies

Protection against water

First digit	Protection against solid bodies	Second digit	protection against water
0	non protected	0	non protected
1	protected against solid foreign objects of 50 mm \varnothing and greater	1	protected against vertically falling water drops
2	protected against solid foreign objects of 12,5 mm \varnothing and greater	2	protected against vertically falling water drops when enclosure tilted up to 15°
3	protected against solid foreign objects of 2,5 mm \varnothing and greater	3	protected against spraying water (rain up to a slope of 60°)
4	Protected against solid foreign objects of 1,0 mm \varnothing and greater	4	protected against splashing water
5	dust - protected	5	protected against water jets
6	dust - tight	6	protected against powerful water jets
		7	protected against temporary immersion in water (0,15 to 1 m depth, 30 min.)
		8	protected against continuous submersion in water under defined pressure and time

Faster and more comfortable installation, average mounting time shortened by 39%. The total length of plugs and sockets was significantly shortened.

Body covers of plugs and sockets are supplied in unlocked but still transport-safe position for faster mounting.

A new design of a cable inlet bushing as well as the ergonomic shape of a sealing nut improves manipulation while mounting the cable and its sealing.

The appropriate colours of actuating levers are used for clear identification: L1, L2, L3, N, and PE. Contacts are supplied in open stand-by position for faster wires mounting.

The lamellar clasp remains safely locked by two serrations in the body of the product even during the manipulation with a cable.

MARKING OF PRODUCTS:

Key for industrial plugs and inlets

Key for industrial sockets

Cable sockets - Screwless IP67 - 16 A/32 A

- Screwless contacts.
- Self-locking click system of cover.
- Miniature dimensions with ergonomic grip and lid opening.
- 16 A - flexible conductors 1 - 2,5 mm².
- 32 A - flexible conductors 2,5 - 6 mm².

101094

Complies with standards: IEC 60309-1, -2
STN EN 60309-1, -2
Material: PA6, ABS
Surface treatment contacts: passivated brass
Operating temperature: -25 °C to +55 °C

House sockets 250 V - IP67

- Screw contacts.
- House socket Or. No 103791 with child protection, 100792 - Schuko system.
- 16 A - flexible/rigid conductors 1 - 2,5/1 - 2,5 mm².

103790

Complies with standards: IEC 60309-1, -2
STN EN 60309-1, -2
Material: PA6, ABS
Surface treatment contacts: passivated brass
Operating temperature: -25 °C to +55 °C

House sockets 48 V - IP54

- Screw contacts.
- It is possible to insert the plug with flat pins 10 A/48 V into this socket, which is in accordance with the norm STN 35 4517 modification "K" (2P). VZ 48 socket can also be used in case of lower voltage, i. e. 24 V or 12 V. For that case it is necessary to add an extra label where applied voltage is written.

103830

Complies with standards:	IEC 60309-1, -2 STN EN 60309-1, -2

Switched interlocked sockets vertical IP67 - 16 A/32 A

- Screw contacts.
- 16 A - flexible/rigid conductors 1 - 2,5/1 - 4 mm².
- 32 A - flexible/rigid conductors 2,5 - 6/2,5 - 10 mm².

105324

Complies with standards: IEC 60309-1, -4
STN EN 60309-1, -4
Material: PA6, ABS
Surface treatment contacts: passivated brass
Operating temperature: -25 °C to +55 °C

Distribution boxes

Distribution boxes belong to the group of low voltage covered distributors according to STN EN 61439-3, -1, operable also by unqualified persons (referred to as DBO). They may be used at building sites, in residential buildings, houses and industrial zones.

They are designed to be mounted mainly on vertical wall, but may also be used as portable (the handle is placed in the upper part of the distribution box), or are fixed to a metal frame stand. The current standard catalog offer contains more than 600 types and combinations of ROS, which are designed for both internal and external use within the temperature range from -25 °C to +55 °C. Distribution boxes do not require any maintenance after installation.

OVERVIEW OF DISTRIBUTION BOXES

- ROS Mini – 8, 4 and 0-modules distribution boxes IP44
- ROSP, ROSPG – Distribution boxes Micro IP54 and IP67
 - Distribution boxes Micro with switch IP44
 - VPS – Inlets with switch IP44
- ROP – Compact distribution boxes with straight inlet IP44
 - ROK – Hang-on distribution boxes ROK IP54
 - ROS 4 – 4-modules distribution boxes IP44
 - ROS-4/V – Distribution boxes with switch IP44
- ROS 6, ROS 7, ROS 11 – 6, 7 and 11-modules distribution boxes IP54
 - ROS M6 – 6- modules distribution boxes IP54 and IP65
 - ROS 16 – 16-modules distribution boxes IP54 and IP66
 - ROS 11S – 11-modules distribution boxes on stand IP54
- ROS 12SD – 12-modules portable distribution boxes with handle IP44
 - ROS 12S, ROS 24S – 12 and 24-modules distribution boxes on stand IP54 and IP65

Distribution boxes can be equipped with single-phase and three-phase MCBs, RCCBs, terminal blocks, sealing glands, industrial three-phase inlets or plugs with connecting cable and sockets 16 A, 32 A and 63 A. They also allow the installation of a single-phase or three-phase one-tariff electricity meter mounted on a DIN rail.

BASIC SPECIFICATION

The housings are resistant to excessive heat and burning (650 °C glow wire test) and are molded from plastics with mechanical resistance in the range of IK08, IK09, IK10. Distribution boxes can be mounted on materials of Class A1 and A2,

Distribution boxes are supplied in the following specifications:

- degree of protection: IP44, IP54, IP65, IP66, IP67
- nominal current InA: 16 A, 32 A, 40 A or 63 A
- nominal working voltage Un: 400 V~, 250 V~, 50/60 Hz
- mechanical resistance of boxes: IK06, IK07, IK08, IK09, IK10

The power supply cable may only be installed by an appropriately qualified person. Distribution boxes are equipped with breakers of the rupturing capacity of 10 kA.

Regarding fusing outside of the distribution box it is recommended to use the MCB with breaking capacity of 10 kA and with the current value equivalent to the current InA stated on the distribution box label.

We also offer distribution boxes fitted with MCB window but without MCBs, fully pre-wired to connect own MCBs of a specific brand according to customer's preferences and in accordance with the recommended and enclosed electrical connection scheme.

WE DISTINGUISH SWITCHBOARDS WITHOUT MCBs, RCCBS AS FOLLOWS:

Fully pre-wired distribution boxes - sign „/x“

Distribution box without the circuit breakers, yet fully equipped with wires to connect the circuit breakers according to the recommended and attached connection scheme. The socket outlets are wired separately for particular connection to the individual circuit breakers and also to the N and PE bridges. Circuit breakers must be used.

Economically pre-wired distribution boxes - sign „/A“ (e.g. 200060 ROS-I 1601 A)

Protected distribution box without the circuit breakers with prepared wires to connect the circuit breakers according to the recommended and attached connection scheme. The socket outlets are not wired separately for particular connection to the individual circuit breakers, they are looped together. Circuit breakers must be used.

Portable distribution boxes ROS 12S and ROS 24S are characterized by a robust construction. Mechanical resistance of the housing is IK 10 and boxes are produced from glass fiber reinforced polyester. Distribution boxes fitted with 4-pole sockets are determined for symmetrical loads only.

INDIVIDUAL CONFIGURATION OF DISTRIBUTION BOXES

Except of distribution boxes in the catalog which are most commonly used in practice we are able to supply the any other atypical designs in acceptable combinations according to the customer's individual specifications.

ROS MINI – 8, 4 AND 0 -MODULES DISTRIBUTION BOXES IP44

Suitable for the connecting of 3-phase and 1-phase electrical appliances. The above types of distribution boxes without handle have been designed to be part of fixed wiring only, with handle as part of mobile wiring. The inlet terminal board is dimensioned for the power supply cable of the maximum of 5 x 4 mm², the power supply cable must be protected for the nominal current value showed on the label.

- degree of protection: IP44
- nominal current: 16 A, 32 A
- nominal working voltage: 400 V~, 250 V~, 50/60 Hz
- mechanical resistance of boxes: IK10

ROSP, ROSPG – DISTRIBUTION BOXES MICRO IP54 AND IP67

Suitable for the connection of 3-phase as well as 1-phase devices. 32 A variants are supplied with 2 x tube fuse F10 A/250 V for protection for single-phase socket. Distribution boxes with handle have been designed to be part of mobile wiring. There is a possibility to use it in exterior as well as interior environment, block of flats and houses, building sites and also in industrial zones.

Box contains cable gland Pg16 for 16 A and Pg21 for 32 A.

- degree of protection: IP 54, IP 67
- nominal current: 16 A, 32 A
- nominal working voltage: 400 V~, 250 V~, 50/60 Hz
- mechanical resistance of boxes: IK10

VZS – DISTRIBUTION BOXES MICRO WITH SWITCH IP44

Suitable for connection if 3-phase and 1-phase electric devices with possibility to switch of by switch

32 A/4P/5P. 32 A variants are supplied along with tube fuse F10H/250V and protection of 1-phase socket.

- degree of protection: IP44
- nominal current: 16 A, 32 A
- nominal working voltage: 400 V~, 250 V~, 50/60 Hz
- mechanical resistance of boxes: IK10

VPS – INLETS WITH SWITCH IP44

They are designed for supplying electric current through an extension cable to 3-phase 16 A and 32 A machines and devices (circular saws, mixers, etc.) with the possibility of switching off the device by a supplied 16 A / 5P or 32 A / 5P switch.

- degree of protection: IP44
- nominal current: 16 A, 32 A
- nominal working voltage: 400 V~, 250 V~, 50/60 Hz
- mechanical resistance of boxes: IK10

ROP – COMPACT DISTRIBUTION BOXES WITH STRAIGHT INLET IP44

A series of compact distribution boxes with IP44 protection. They are equipped with a straight industrial inlet 16 A / 32 A / 5P / 4P / 400 V at the input. They offer a wide combination of the three available outputs and the offer includes 2 types in 32 A and 8 types in 16 A power. These compact distribution boxes with an inlet can be used both outdoors and indoors, in residential buildings and houses, on construction sites and also in industrial plants.

- degree of protection: IP44
- nominal current: 16 A, 32 A
- nominal working voltage: 400 V~, 250 V~, 50/60 Hz
- mechanical resistance of boxes: IK06

ROK – HANG-ON DISTRIBUTION BOXES ROK IP54

ROK Hang-on distribution boxes are designed for hanging in space and can be used outdoors as well as indoors, in residential buildings and houses, on construction sites and in industrial plants. They are equipped with a straight industrial inlet 16 A / 32 A / 5P 400 V in the standard version (including the possibility of reversing 5P inlets), also with sealing metric gland M25, M35 and four outputs with the possibility of combination with three-phase sockets 32 A/16 A/5P/400 V and single-phase sockets 16 A/400 V, 250 V/16 A according to user requirements. The back side may be equipped with a quick connector and a hose insertion for compressed air distribution. The 700 mm long chain with spring hooks to fix the distribution box is supplied separately.

- degree of protection: IP54
- nominal current: 16 A, 32 A
- nominal working voltage: 400 V~, 250 V~, 50/60 Hz
- mechanical resistance of boxes: IK07

ROS 4 – 4-MODULES DISTRIBUTION BOXES IP44

They represent a group of compact distribution boxes, which are suitable for connecting of three-phase and single-phase electrical appliances with the possibility of protection. Possibility of use in exterior and interior, in residential buildings and houses, on construction sites and also in industrial plants. They are produced in versions as protected and without MCBs, but fully pre-wired.

- degree of protection: IP44
- nominal current: 16 A, 32 A
- nominal working voltage: 400 V~, 250 V~, 50/60 Hz
- mechanical resistance of boxes: IK08

ROS-4/V – DISTRIBUTION BOXES WITH SWITCH IP44

Suitable for connection if 3-phase and 1-phase electric devices with possibility to switch of by switch- 32A variants are supplied along with tube fuse F10 A/250V and protection of 1-phase socket. There is a possibility to use it in exterior as well as interior environment, block of flats and houses, building sites and also in industrial zones. Box contains cable gland for sealing input cable.

- degree of protection: IP44
- nominal current: 16 A, 32 A
- nominal working voltage: 400 V~, 250 V~, 50/60 Hz
- mechanical resistance of boxes: IK08

ROS 6, ROS 7, ROS 11 – 6, 7 AND 11-MODULES DISTRIBUTION BOXES IP54

Protected

The recommended distribution box input cable is 5 x 6 mm² and it must be connected via a three-phase 32A breaker parameter C. Individual types are equipped with three-phase and single-phase sockets, breakers, and cable gland M32.

Without MCBs, fully pre-wired

The recommended distribution box input cable is 5x6 mm², the maximum total current stated on the label. The power input cable must be connected as follows: connect phase conductors via the breaker, which will be mounted by users themselves according to their own choice, to the inlet terminal board, the size of the breakers must be sufficient to enable protection with respect to the maximum current stated on the label. Connect PE and N conductors directly to inlet terminal.

- the maximum total current: 32 A
- degree of protection: IP 54
- nominal current: 16 A, 32 A

- nominal working voltage: 400 V~, 250 V~, 50 Hz
 - mechanical resistance of boxes: IK 10

Types with a current protector are provided in sizes ROS 6 and ROS 11. They are normally equipped with a current protector for the fault current $I\Delta n \leq 30$ mA.

ROS M6 – 6-MODULES DISTRIBUTION BOXES IP54 AND IP65

The distribution box cover is pressed from halogen free thermoplastic. Distribution boxes have been designed for both internal and external use within the temperature range from -25°C to $+55^{\circ}\text{C}$. The power supply cable may only be installed by an appropriately qualified person. They are all supplied in the following specifications:

- degree of protection: IP54 or IP65
 - nominal current: 16 A, 32 A, 63 A
- nominal working voltage: 400 V~, 250 V~, 50/60 Hz
 - mechanical resistance of boxes: IK09
 - doubled insulation

ROS 16 – 16-MODULES DISTRIBUTION BOXES IP54 AND IP66

- Protected MCB/RCCB.
 - Unprotected - pre-wired.
- ROS 16/FI - Standard = distribution boxes are fully equipped with the necessary MCBs and RCCBs.
 - ROS 16/I - Economic = basic number MCBs.
- ROS 16/x - Unprotected = without MCBs, precabing ready for installation MCBs according to the Standard version.

Benefits:

- The most compact design in 16 modules series of distribution boxes on the market (H x W x D = 450 x 328 x 136 mm) with ergonomically sloped surface.
- Available in combinations with CEE 63 A sockets, 63 A main switch or 63 A panel plug for mutual looping facility of more ROS 16 on the site.
- 63 standard combinations kept on stock and over 2400 combinations of inlets, outlets and MCB/RCCB protection available on request.
 - Suitable for construction sites, industrial distributions and residential buildings.

PARAMETERS:

- Low voltage distribution on-wall boxes from highly durable ABS material with extra thick walls (4 mm),
 - Mechanical resistance of boxes: IK10
 - MCB/RCCB-protected
 - Non-protected – pre-wired
 - Pre-injected recessed circles for cable glands M25; M32; M40; M50
 - Self extinguishing: 650 °C - resistant against overheating and burning
- Ingress protection degree available in IP54 and IP66
 - In compliance with EN 61439-1, -3

ROS 11S – 11-MODULES DISTRIBUTION BOXES ON STAND IP54

Portable distribution boxes are designed mainly for internal and external use. They are offered with an M32 gland for connecting the supply cable, or with a supply cable with a length of 2 m and a plug 32 A / 5P / 400 V. They are all supplied in the following specifications:

- degree of protection: IP54
- nominal current: 32 A
- nominal working voltage: 400 V~, 250 V~, 50/60 Hz
- mechanical resistance of boxes: IK10

ROS 12SD – 12-MODULES PORTABLE DISTRIBUTION BOXES WITH HANDLE IP4

Suitable for the connection of 3-phase as well as 1-phase consumers. Distribution box with handle have been designed to be part of mobile wiring. There is a possibility to use it in exterior as well as interior environment, block of flats and houses, building sites and also in industrial zones. They are equipped by MCBs as well as current RCCBs.

Dimensions (mm) 194 x 384 x 230 (width x height x depth)

- degree of protection: IP44
- nominal current: 16 A, 32 A
- nominal working voltage: 400 V~, 250 V~, 50/60 Hz
- mechanical resistance of boxes: IK08

ROS 12S, ROS 12SG, ROS 24S, ROS 24SG – 12 AND 24-MODULES DISTRIBUTION BOXES ON STAND IP54 AND IP65

The group includes two distribution boxes and option of modular superstructures with a maximum of 12 or 24 modules with 63 A three-phase switch. The distribution box cover is pressed from polyester and strengthened by glass fibre. Distribution boxes have been designed for external use. They are all supplied in the following specifications:

- degree of protection: IP 54, IP 65
- nominal current: 16 A, 32 A
- nominal working voltage: 400 V~, 250 V~, 50 Hz
- mechanical resistance of boxes: IK 10
- resistance to pressure: 200 N/mm²
- heat and combustion resistance: UL94: V0.

The input cable may only be installed by an appropriately qualified person. Portable distribution boxes with a holder can be equipped with breakers, current protector 16 A, 32 A sockets. We offer four-pole and five-pole modifications with predefined fitting of devices in two sizes of the boxes. Portable distribution boxes with a holder can be used where the connection of more devices with 32 A and 16 A electricity use is needed to the distribution board while being protected.

Used brands of circuit MCBs and RCCB

Mini distribution boxes ROS 8 IP44 with RCCB

- Designed for wall mounting as part of a fixed wiring.
- Distribution boxes do not require any maintenance after installation.
- Cover resistant against excessive heat and fire (650 °C glow wire test).
- Dimensions 260 x 190 x 106 mm (h x w x d).

200006

Complies with standards: STN EN 61439-1, STN EN 61439-3
 Mechanical resistance of box: IK10
 Degree of protection: IP44
 Material: ABS
 Nominal working voltage: 400 V~, 250 V~, 50/60 Hz
 Operating temperature: -25 °C to +55 °C

DISTRIBUTION BOXES

0-modules distribution boxes Mini with handle

CONNECTING ENERGY

Mini distribution boxes ROS IP44 unprotected, handle

- Distribution boxes with handle have been designed to be part of mobile wiring.
- Distribution boxes do not require any maintenance after installation.
- Cover resistant against excessive heat and fire (650 °C glow wire test).
- Dimensions 305 x 190 x 106 mm (h x w x d).

Complies with standards: STN EN 61439-1, STN EN 61439-3
 Mechanical resistance of box: IK10
 Degree of protection: IP44
 Material: ABS
 Nominal working voltage: 400 V~, 250 V~, 50/60 Hz
 Operating temperature: -25 °C to +55 °C

Micro distribution boxes ROSP IP54

- Designed for wall mounting as part of a fixed wiring.
- Distribution boxes do not require any maintenance after installation.
- Cover resistant against excessive heat and fire (650 °C glow wire test).
- In case of combination of 16 A and 32 A sockets additional protection with F10 A / 250 V tube fuses.
- Dimensions 148 x 190 x 117 mm (h x w x d).

200272

InA = Rated current of switchgear and control gear assembly

Mini distribution boxes ROK IP54

- Cover resistant against excessive heat and fire (650 °C glow wire test).
- Powered by straight inlet or installed cable gland M 25.
- Using in exterior or interior, residential sector, building sites and industrial zones.
- Order no. 200440, 200441 contain a quick connector with a hose insert for compressed air distribution.

Complies with standards: STN EN 61439-1, STN EN 61439-3
 Mechanical resistance: IK07
 Degree of protection: IP54
 Material: ABS
 Nominal working voltage: 400 V~, 250 V~, 50/60 Hz
 Operating temperature: -25 °C to +55 °C

Distribution boxes ROS M6 IP54 protected

- Designed for wall mounting as part of a fixed wiring.
- Distribution boxes do not require any maintenance after installation.
- Cover resistant against excessive heat and fire (650 °C glow wire test).
- Doubled insulation.
- Pre-injected circle ø 20 mm for cable glands - bottom and top.
- Dimensions 495 x 125 x 107 mm (h x w x d).

201090

Complies with standards: STN EN 61439-1, STN EN 61439-3
 Mechanical resistance of box: IK09
 Degree of protection: IP54, IP65 Ord. No. 201090
 Material: ABS
 Nominal working voltage: 400 V~, 250 V~, 50/60 Hz
 Operating temperature: -25 °C to +55 °C

Distribution boxes ROS 11 IP54 protected

- Designed for wall mounting as part of a fixed wiring.
- Distribution boxes do not require any maintenance after installation.
- Cover resistant against excessive heat and fire (650 °C glow wire test).
- Ord. No. 202088, 202089 with safety toroidal transformer (SELV) 24 V AC / 150 VA.
- Pre-injected centric circles for glands on top: 2x (M25; M32); bottom and rear: 1x (M25; M32).
- Dimensions 343 x 241 x 163 mm (h x w x d).

Complies with standards: STN EN 61439-1, STN EN 61439-3
 Mechanical resistance of box: IK10
 Degree of protection: IP54
 Material: ABS
 Nominal working voltage: 400 V~, 250 V~, 50/60 Hz
 Operating temperature: -25 °C to +55 °C

InA = Rated current of switchgear and control gear assembly

Distribution boxes ROS 16 IP54 a IP66

- ROS 16/FI -Standard = distribution boxes are fully equipped with the necessary MCBs and RCCB.
- ROS 16/I - Economic= basic number MCBs.
- ROS 16/x - Unprotected = without MCBs, precabling ready for installation MCBs according to the Standard version.
- Designed for wall mounting as part of a fixed wiring.
- Cover resistant against excessive heat and fire (650 °C).
- Pre-injected centric circles for glands from top and bottom: 2x (M32; M40), 1x (M25; M32; M40; M50); rear 1x (23.5 to 52.5 mm).
- Supplied gland M 40 in combinations without inlet.
- Max. cable entry: 5 x 25 mm²
- Dimensions 450 x 328 x 136 mm (h x w x d).

Complies with standards:: STN EN 61439-1, STN EN 61439-3
 Mechanical resistance of box: IK10
 Material: ABS
 Nominal working voltage: 400 V~, 250 V~, 50/60 Hz

DISTRIBUTION BOXES

Building distribution boxes 12 modules

CONNECTING ENERGY

Portable distribution boxes ROS 12SD IP44, handle

- Distribution boxes with handle have been designed to be part of mobile wiring.
- Using in exterior or interior, residential sector, building sites and industrial zones.
- Cover resistant against excessive heat and fire (650 °C glow wire test).
- Pre-injected centric circles for glands bottom: 1x (M25; M32).
- Dimensions 385 x 195 x 215 (h x w x d).

204040

Complies with standards:	STN EN 61439-1, STN EN 61439-3
Mechanical resistance of box:	IK08
Degree of protection:	IP44
Material:	ABS
Nominal working voltage:	400 V~, 250 V~, 50/60 Hz
Operating temperature:	-25 °C to +55 °C

DISTRIBUTION BOXES

Building distribution boxes 16 modules

CONNECTING ENERGY

Distribution boxes on stand ROS 16S IP54 and IP66 with RCCB

- ROS 16S/FI - Standard = distribution boxes are fully equipped with the necessary MCBs and RCCB.
- Distribution boxes with handle have been designed to be part of mobile wiring.
- Using in exterior or interior, residential sector, building sites and industrial zones.
- Cover resistant against excessive heat and fire (650 °C glow wire test).
- Possibility of locking in position 0.
- Pre-injected centric circles for glands from top and bottom: 2x(M32; M40), 1x(M25; M32; M40; M50); rear 1x (23,5 to 52,5 mm).
- Supplied gland M 40 in combinations without inlet.
- Max. cable entry: 5 x 25 mm².
- Dimensions 817 x 400 x 262/518 mm (h x w x d).

Complies with standards::	STN EN 61439-1, STN EN 61439-3
Mechanical resistance of box:	IK08
Material:	ABS
Nominal working voltage:	400 V~, 250 V~, 50/60 Hz

TERMINAL BLOCKS, STRIPS AND TERMINAL BOARDS

CONTENTS

Terminal blocks, strips and terminal boards	122 - 125
Terminal blocks	126 - 128
Ending clamp	128
DIN rails	129
Terminal strips	129
Instrument terminal strips	130
Ceramic couplings and ceramic terminal blocks	130 - 131
Terminal boards for rising mains	131 - 133
Equipotential terminal blocks	133

TERMINAL BLOCKS, STRIPS AND BOARDS

The basic features of the original system of terminal blocks by SEZ DK include:

RS, RSDPS are designed for connecting of copper rigid and stranded conductors. RSDPS are certified also for aluminum conductors

- quality plastic materials complying with the hot wire test for 850°C
- colour ranges adjusted to your requirements
- copper and brass materials with a special surface finish in order to provide the lowest transfer resistance and the maximum anti-corrosion protection
- high variability of connecting options

Technical solutions guarantee convenient, fast and effective installation of electric distributions. Terminal blocks are fitted with wound clamps with the screw shanks fastened in the pressed case. Unless otherwise stated, each terminal enables a reliable connection of one or more conductors with the nominal connecting cross section one or two degrees smaller (e.g. terminal 2,5 mm² enables the connection of conductors 1,5 or 1 mm² as well). The torsion moment of screw terminals complies with the requirements of EN 60998-2-1.

INTERCONNECTION OF TERMINAL BLOCKS

The interconnection of terminal blocks is enabled by jumpers for the connection of 2, 3 and 5 terminal blocks. The side walls of terminal blocks must be removed prior to connection. The jumpers consist of a connecting bridge and screws. After the connecting screws (screw) have been removed, the interconnection of terminal blocks over terminal blocks with a different voltage will also be enabled. The surface ways and air distances between jumpers and live parts of such terminal block correspond with the nominal insulation voltage. The interconnection range may be increased if several jumpers are connected by a connecting bridge for two terminal blocks.

TERMINAL BLOCKS RS

A terminal blocks for universal use.

It has the following advantages compared to RSDPS series:

- protection increased to IP 20
- when using jumpers, a space between terminal blocks is unnecessary
- better fastening to DIN rail
- larger connection range

TERMINAL BLOCKS RSDPS

Traditional and popular solution for electric distributions. Degree of protection IP 00. Both case and screws are made of brass.

JUMPERS

They are used for the permanent connection of adjoining terminal blocks in a terminal board. A space of the width of one terminal block must be left between the jumpers of different polarity and different poles, respectively.

TERMINAL BOARDS FOR DEVICES AND RISING MAINS

Our terminal boards for devices and rising mains are manufactured from a variety of materials in order to ensure reliable operation under all conditions:

Material - thermoplast

- With permanent heat resistance 100 °C.
- For the operation environment -25 °C to 40 °C.
- With short-term heat resistance 140 °C.
 - With hot wire resistance 850 °C.

Ceramic material

- With permanent heat resistance 110 °C.
- With short-term heat resistance 140 °C.

Material for terminals

- Brass material.
- Brass material galvanically modified.

INSTRUMENT TERMINAL STRIPS 12 POLES

It is mainly used in industrial distributions in compliance with EN 60947-7-1. They are also designed for home use by EN 60998-2-1, which sets out the torque of screw terminals.

CERAMIC INSTRUMENT TERMINAL BLOCKS 4P/6P WITH FLANGE

Ceramic terminal blocks for devices are widely used in the connection of electric devices and in the distributors with a higher working temperature (up to 110 °C; up to 140 °C short-term).

Ceramic terminal blocks are manufactured in 4- and 6-pole modifications. Surface-treated terminal bridges made of brass are riveted on the body of terminal board. There are two fastening screw openings in the body.

TERMINAL BLOCKS FOR LIGHTING FITTINGS 2P/3P

Terminal blocks for lighting fittings have been designed for the connection in light distributions. Their ceramic case contains two (or three) bushing terminals in profile openings. The number of bushing terminals corresponds to the number of poles. There is one (or two) fastening opening(s) of $\varnothing 3,5$ mm in the case.

CERAMIC COUPLINGS FOR LIGHTING 1P/2P/3P

Ceramic couplings for lighting are used for the connection in electric light installations. The ceramic case contains 1-3 bushing terminals in profile openings. The number of bushing terminals corresponds to the number of poles.

TERMINAL BOARDS FOR RISING MAINS

They are used to connect branches to rising mains. All the Types consist of the main body made from thermoplastic which carries appropriate terminal H-bridges. Each bridge contains one transition splice clamp for the connection of main conductor without its interruption and 4 bushing terminals for connecting of branch conductors.

TERMINAL BOARDS 1P AND 4P FOR RISING MAINS 35 mm².

Terminal board 4P (Ord. No. 300510/HSV 35) is supplied in four-pole modification and terminal board 1P (Ord. No. 300480/SV 35) in single-pole modification. Terminal board 4P (Ord. No. 300510/HSV 35) and 1P (Ord. No. 300480/SV 35) may be joined to blocks to obtain a five-pole formation usable in a five-pole installation system. The construction of main board enables the fastening of terminal board to a pad by M5 screws or by sliding it on a shaped DIN rail TS 35 mm.

With cover:

Type 4P (Ord. No. 300511/HSV 35K) in fact an 4P (Ord. No. 300510/HSV 35) terminal board with a sealable cover made from transparent plastic, with openings for the measuring needle measurement, and with the degree of protection IP20 after of all the conductors have been connected into clamps. Type 1P (Ord. No. 300481/SVK 35) is in fact an 1P (Ord. No. 300480/SV 35) terminal board with a sealable cover made from transparent plastic, with openings for the measuring needle measurement, and with the degree of protection IP 20 after of all the conductors have been connected into clamps. Using 1P (Ord. No. 300480/SV 35) as a fifth pole, it is necessary to re-label sign "PEN" to "N" on 4P (Ord. No. 300510/HSV 35) and label the pole of 1P (Ord. No. 300480/SV 35) as "PE".

TERMINAL BOARDS 1P AND 4P FOR RISING MAINS 95 mm².

Terminal board 4P (Ord. No. 300520/HSV 95) is supplied in four-pole modification and terminal board 1P (Ord. No. 300490/SV 95) in single-pole modification. Terminal boards 4P (Ord. No. 300520/HSV 95) and 1P (Ord. No. 300490/SV 95) may be joined to blocks to obtain a five-pole formation usable in a five-pole installation system TN-S. The construction of main board enables the fastening of terminal board to a pad by M5 screws or by sliding it on a shaped DIN rail TS 35. The terminal board may be secured against drawing-out by a plastic bayonet joint.

With cover:

Type 4P (Ord. No. 300521/HSV 95K) is in fact an 4P (Ord. No. 300520/HSV 95) terminal board with a sealable cover made from transparent plastic, with openings for the measuring needle measurement, and with the degree of protection IP 20 after of all the conductors have been connected into clamps. Type 1P (Ord. No. 300491/SVK 95) is in fact an 1P (Ord. No. 300490/SV 95) terminal board with a sealable cover made from transparent plastic, with openings for the measuring needle measurement, and with the degree of protection IP 20 after of all conductors have been connected into clamps. Using 1P (Ord. No. 300490/SV 95) as a fifth pole, it is necessary to re-label sign "PEN" to "N" on 4P (Ord. No. 300520/HSV 95) and label the pole of 1P (Ord. No. 300490/SV 95) as "PE". Fastening with M5 screws or on DIN rail 35 mm.

EQUIPOTENTIAL TERMINAL BLOCKS SINGLE AND DOUBLE ROW

According to the norm STN 33 2000-4-41, the equalisation of potential is required during installation to provide safety against electric current injuries. It is achieved by the mutual connection of conductive non-live parts of the device and external conductive parts by a conductor of prescribed cross section.

The main connection is established in each building and in each object by a mutual conductive connection of the following elements:

- protection conductor of the network
- grounding supply or main protective terminal
- conductive pipeline and pipes leading into the object (gas, water, heating, air-conditioning, etc.)
- aerials, telephone devices.

The equipotential terminal board has been designed for main and also complementary connection in both home and industrial distributions. The connecting part of terminal board consists of brass bridge with steel terminals and splice for the fixation of main grounding or the steel rope. The terminals are mechanically secured against fall-out. The whole bridge is fixed in two insulation cases made from thermoplastic.

The terminal boards may be fastened in several ways:

- to rail Din TS 35
- by two screws of $\varnothing 5 \times 30$ through the bridge and the insulation case
- by four screws of $\varnothing 4 \times 10$ through the insulation case

Terminal blocks RS 2,5 - 120

- Designed for connecting of copper rigid and flexible conductors.
- Mutual interconnection of terminal blocks by using of jumpers for 2, 3 and 5 clamps.
- The surface ways and air distances between jumpers and live parts of such terminal block correspond with the nominal insulation voltage.
- Available in multiple colours.
- Mounting on DIN rails 35 mm: Ord. No. 300000 - 300041.
- Mounting on DIN rails 32 mm: Ord. No. 300028 - 300034.
- Mounting on DIN rails 15 mm: Ord. No. 300000 - 300027.

Complies with standards: EN 60947-7-1, EN 60998-2-1
 The torsion moment of screw terminals complies with the requirements: EN 60998-2-1
 Degree of protection: IP20
 Material: Polyamide PA6, Cu and brass
 Nominal insulation voltage: 800 V
 Glow wire test: 850 °C
 Operating temperature: -20 °C to +75 °C

Terminal blocks RSDPS

- Designed for connecting of copper rigid and flexible conductors - they are also certified for aluminum conductors.
- Mutual interconnection of terminal blocks by using of jumpers for 2, 3 clamps.
- The surface ways and air distances between jumpers and live parts of such terminal block correspond with the nominal insulation voltage.
- Mounting on DIN rail 35 mm, 32 mm, 15 mm.

Complies with standards:	EN 60947-7-1, EN 60998-2-1
The torsion moment of screw terminals complies with the requirements:	EN 60998-2-1
Degree of protection:	IP00
Material:	Polyamide PA6, Brass clamp and screws
Nominal insulation voltage:	500 V
Nominal insulation voltage:	660 V - Ord. No. 300082
Glow wire test:	850 °C
Operating temperature:	-20 °C to +75 °C

Ending clamp

- It is used to secure a group of terminal blocks on a DIN rail against side displacement.

Material:	Polyamide
Operating temperature:	-20 °C to +75 °C

300190

Ord. No. (Type)	Width (mm)	Pkg. (pcs.)
300190 (RSD 88)	8,5	200

Din rails TS 35

- Designed for mounting devices (MCBs, contactors, terminals, etc.) in switchboards or distribution boxes.
- With holes and grooves at both ends for quick mounting on the base.
- Width 35 mm.

Material: Zinc steel

300232, 300239

300222, 300229

Terminal strips 7/12/15 clamps

- Terminal blocks for mounting on a 35 mm DIN rail width.
- DIN rail mounting by clicking.
- Available in green, blue, black and yellow.

Complies with standards: EN 60947-7-1, EN 60998-2-1
Degree of protection: IP00
Material: Polyamide PA6 - self-extinguishing
Material: Brass
Screws: M4
Operating temperature: -5 °C to +60 °C

Terminal boards 1P for rising mains 35 mm²

- They are used in rising distribution boards in apartment buildings.
- No need to interrupt the main rising conductor.
- Ord. No. 300481 - with cover.
- Fastening with M5 screws or on DIN rail 35 mm.
- The lock allows terminal blocks to be connected side by side.
- Rising terminals boards sealable.
- Inbus screws with cylinder head.

Complies with standards: EN 60947-7-1, EN 60998-2-1
Degree of protection: IP00, IP20 with cover
Material: Thermoplastic

Terminal boards 1P for rising mains 95 mm²

- They are used in rising distribution boards in apartment buildings.
- No need to interrupt the main rising conductor.
- Ord. No. 300491 - with cover.
- Fastening with M5 screws or on DIN rail 35 mm.
- The lock allows terminal blocks to be connected side by side.
- Rising terminals boards sealable.
- Inbus screws with cylinder head.

Complies with standards: EN 60947-7-1, EN 60998-2-1
Degree of protection: IP00, IP20 with cover
Material: Thermoplastic

INSTALLATION BOXES, CABLE GLANDS AND TERMINAL BLOCKS

CONTENTS

Installation boxes, cable glands and terminal blocks	136- 139
On wall boxes with terminal rings	140 - 141
Under the plaster boxes	141 - 142
Hollow walls boxes	143 - 144
Hollow walls boxes, terminal rings	144
On wall boxes	145 - 146
Junction box with proven functionality in fire	147
Surface boxes for trunkings	148
On wall boxes IP65	149
Junction and lightning protection boxes	150
Cable glands Pg, Metric and fixing nuts	151 - 153
Cable connectors	154
Mounting accessories	155 - 157

Installation boxes, cable glands and terminal blocks

The safety of electric installations is greatly influenced by the quality of the installation distributions used in residential and industrial buildings. While most cable distributions are protected by the self-extinguishing halogen PVC, installation boxes available on the market are manufactured from various plastics with different self-extinguishability rates.

INSTALLATION ON FLAMMABLE SURFACES

SEZ DK realizes our responsibility for your safety and so we developed an elaborated informational system of the usability of our installation boxes on the different classes of building materials with respect to their flammability. Standard STN EN 13501-1 introduced a new approach, where instead of flammability introduced "Reaction to fire".

tab. 1 - Slovak Republic

Degree of flammability according to the old STN 73 0862		Classification according to the new STN EN 13501-1 (Reaction to fire)
A	Non-flammable	A1
		A2-s1, d0
B	Not easily flammable	Other A2, B
C1	Difficulty flammable	C
C2	Medium flammable	D, E
C3	Easily flammable	F

tab. 2 - Czech Republic

Degree of flammability according to the old CSN 73 0862		Classification according to the new STN EN 13501-1 (Reaction to fire)
A	Non-flammable	A1
B	Not easily flammable	A2
C1	Difficulty flammable	B
C2	Medium flammable	C or D
C3	Easily flammable	E or F

Below we present a detailed classification of particular building materials according to their trade names.

LISTING OF BUILDING MATERIALS IN TERMS OF THEIR FLAMMABILITY ACCORDING TO STN 730823

Class: A - Meaning: non-flammable building materials

Example: stone, slate, sandstone, granite, concrete, bricks, concrete blocks, pavement blocks, ceramic tiles, mortars, cement plasters, gypsum plasters, perlite, building metals (steel, aluminum), glass, fused basalt and fire-retardant coatings and some types of plasterboard.

Class: B - Meaning: not easily flammable

Example: Akumin, Izomin, Heraclite, nonsoftened PVC (Novodur, Durofol B), tough PVC (Duroplast H, Dekorplast), retarded polyester glass laminate, mineral fiber boards (basalt felt).

Class: C1 - Meaning: difficulty flammable

Example: foliaceous wood (oak, beech, ash), retarded polystyrene, hardened paper, organic fiber boards, plywood for general use.

Class: C2 - Meaning: medium flammable

Example: coniferous wood (spruce, fir, pine, red spruce), general purpose chipboard, SP-type cork boards, cork parquets, rubber flooring.

Class: C3 - Meaning: easily flammable

Example: laminated chipboards, sawdust boards, BA type cork boards, linear polyethylene, expanded polyethylene standard, organic glass (Acrylon, Umplex), polypropylene, foam rubber, rubber insulation carpet for electrical engineering, floor fabrics woven with synthetic fibres, cardboard and bituminous binder materials, asphalt belt with a type S cardboard insert.

According to the new standard STN 332312: 2013 not required thermal insulation panel. Article 4. 6. 1 of that standard states that the mounting box directly into a flammable material can be performed, provided that the boxes are resistant to the spread of flame, or meet resistance of insulating material requirements according to STN EN 60670 -1 i resistance to glow wire 650 °C. (850 °C for hollow walls).

MATERIALS USED

We build on our long-standing experience and our customers' requirements in the construction of our products. We take into account the requirements of maximum quality and environmental protection, as well as those of budget limitations.

RESISTANCE OF MATERIALS

The external parts of products and the insulation parts bearing live parts must be resistant to both excessive heat and combustion. The hot wire test, detailed in IEC 60695-2-11, is used to check whether this requirement has been met. The minimum resistance to hot wire effects is 650 °C for covers made of insulation material and 850 °C for insulation parts bearing live parts and for insulation parts into hollow walls.

Junction boxes ACIDUR 3 with Pg lamellar cable glands - IP67

- Used for connecting and branching of installation cables.
- For use in an environment with increased humidity and dust.
- Cable sealing with a single elastic sealing ring.
- Ensured sealing after cutting off the preinjected blanks even without a cable.
- Protected design at EU level.

Complies with standards: STN EN 60670-1 and STN EN 60670-22
 Degree of protection: IP67
 Material: PA - self-extinguishing 30 s
 Nominal insulation voltage: 400 V~
 Glow wire test: 850 °C
 Installation on the surface of class (SK): I_{max} ≤ 16 A - materials A1 to E
 I_{max} > 16 A - material A1
 Operating temperature: -25 °C to +60 °C

Ord. No. (Type)	Rigid conductor cross section (mm ²)	Bridges / No. of terminals			Sealing range (mm)	Colour	Pkg. (pcs.)	Dimensions (mm)

400027 (6455-12 5.P/7 ACIDUR 3)						brown					

Junction boxes ACIDUR Classic with Pg cable glands - IP67

- Used for connecting and branching of installation cables.
- For use in an environment with increased humidity and dust.
- Cable glands with two cut-off thin-wall elastic rings to achieve appropriate sealing in two ranges.

Complies with standards: STN EN 60670-1 and STN EN 60670-22
 Degree of protection: IP67
 Material: PP - self-extinguishing 30 s
 Nominal insulation voltage: 400 V~
 Glow wire test: 850 °C
 Installation on the surface of class (SK): I_{max} ≤ 16 A - materials A1 to E
 I_{max} > 16 A - material A1
 Operating temperature: -25 °C to +60 °C

Ord. No. (Type)	Rigid conductor cross section (mm ²)	Bridges / No. of terminals			Sealing range (mm)	Colour	Pkg. (pcs.)	Dimensions (mm)

Junction boxes with snap-on lid and elastic cut-off glands - IP54

- Used for connecting and branching of installation cables.
- Snap-on lid reduces box opening time by 90 %.
- Version with screw terminals or without (empty box).
- Elastic cut-off gland 4 x Pg 13,5.

Complies with standards: STN EN 60670-1 and STN EN 60670-22
 Degree of protection: IP54
 Material: PP - self-extinguishing 30 s
 Nominal insulation voltage: 400 V~
 Glow wire test: 850 °C
 Installation on the surface of class (SK): I_{max} ≤ 16 A - materials A1 to E
 I_{max} > 16 A - material A1
 Operating temperature: -25 °C to +60 °C

Ord. No. (Type)	Rigid conductor cross section (mm ²)	Bridges / No. of terminals			Sealing range (mm)	Colour	Pkg. (pcs.)	Dimensions (mm)

Junction box with elastic cut-off glands - IP43

- Used for connecting and branching of installation cables.
- Cable sealing range from 7 to 14 mm.
- The box contains 4P terminal ring.

Complies with standards:	STN EN 60670-1 and STN EN 60670-22
Degree of protection:	IP43
Material:	PVC - self-extinguishing 30 s
Nominal insulation voltage:	400 V~
Glow wire test:	850 °C
Installation on the surface of class (SK):	Imax ≤ 16 A - materials A1 to E
Operating temperature:	Imax > 16 A - material A1 -25 °C to +60 °C

Universal boxes 71 x 43 mm

- Allows to install the lid by snapping at the adjustable depth.
- Allows to install also a lid with a 60 mm screw distance.
- The lock allows to link boxes side by side.

Complies with standards:	STN EN 60670-1 and STN EN 60670-22
Degree of protection:	IP20 with lid
Material:	PP
Nominal insulation voltage:	400 V~
Glow wire test:	650 °C
Installation on the surface of class (SK):	material A1
Operating temperature:	-25 °C to +60 °C

Instrument box 71 x 43 mm halogen-free

- Halogen-free material for buildings with an increased request for protection of people and property.
- The lock allows to link boxes side by side.

Complies with standards:	STN EN 60670-1
Degree of protection:	IP20 with lid
Material:	ABS - halogen-free
Nominal insulation voltage:	400 V~
Glow wire test:	650 °C
Installation on the surface of class (SK):	material A1
Operating temperature:	-25 °C to +60 °C

400130

Ord. No. (Type)	Diameter (mm)	Depth (mm)	Inlet openings	Accessories in the package	Colour	Pkg. (pcs.)	Dimensions (mm)

Deep univerzal box 71 x 73 mm for intelligent installations

- Used for simultaneous cables distribution and installation of terminal ring 4P/3 clamps and installation of electro-installation devices as well as devices of intelligent installation.
- Thickness of the hollow wall 10 to 30 mm.
- The lock allows to link boxes side by side.
- Box designed for use in hollow walls.
- Ord. No. 400201 includes a terminal ring 4P/3 with a 82 mm lid.

Complies with standards: STN EN 60670-1 and STN EN 60670-22
Material: PP - self-extinguishing 30 s
Nominal insulation voltage: 400 V~
Glow wire test: 850 °C
Instal. on the surface of class (SK): materials A1 to E
Operating temperature: -25 °C to +60 °C

Universal box for hollow walls

- New claws made from plastic.
- The metal screw features a double thread that speeds up the assembly into hollow walls.
- Thickness of the hollow wall 5 to 30 mm.
- Diameter of drilled holes 72 mm.

Complies with standards: STN EN 60670-1
Material: PP - self-extinguishing 30 s
Nominal insulation voltage: 400 V~
Glow wire test: 850 °C
Instal. on the surface of class (SK): materials A1 to E
Operating temperature: -25 °C to +60 °C

Ord. No. (Type)	Diameter (mm)	Depth (mm)	Inlet openings	Colour	Pkg. (pcs.)	Dimensions (mm)				
						A	B	C	D	D1
400211 (KUP 68 LP/SK)	79	45	3 x ø 21/12	grey	90	76	60	45	79	72

Universal box for hollow walls, double

- New claws made from plastic.
- The metal screw features a double thread that speeds up the assembly into hollow walls.
- Thickness of the hollow wall 5 to 30 mm.
- Diameter of drilled holes 68 mm.
- For installations into multiple frames.

Complies with standards: STN EN 60670-1
Material: PP - self-extinguishing 30 s
Nominal insulation voltage: 400 V~
Glow wire test: 850 °C
Instal. on the surface of class (SK): materials A1 to E
Operating temperature: -25 °C to +60 °C

Ord. No. (Type)	Diameter (mm)	Depth (mm)	Inlet openings	Colour	Pkg. (pcs.)	Dimensions (mm)				
						A	B	C	D	D1
400212 (KUP 68 LP/2 SK)	144	45	4 x ø 21/12 4 x ø 12 2 x ø 21 4 x (10 x 18)	grey	70	144	60	45	73	68

Universal box for hollow walls, tripple

- New claws made from plastic.
- The metal screw features a double thread that speeds up the assembly into hollow walls.
- Thickness of the hollow wall 5 to 30 mm.
- Diameter of drilled holes 68 mm.
- Or installations into multiple frames.

Complies with standards: STN EN 60670-1
Material: PP - self-extinguishing 30 s
Nominal insulation voltage: 400 V~
Glow wire test: 850 °C
Instal. on the surface of class (SK): materials A1 to E
Operating temperature: -25 °C to +60 °C

Ord. No. (Type)	Diameter (mm)	Depth (mm)	Inlet openings	Colour	Pkg. (pcs.)	Dimensions (mm)				
						A	B/E	C	D	D1
400213 (KUP 68 LP/3 SK)	215	45	6 x ø 21/12 4 x ø 12 4 x ø 21 8 x (10 x 18)	grey	80	215	60	45	73	68

Universal box for hollow walls, quadruple

- New claws made from plastic.
- The metal screw features a double thread that speeds up the assembly into hollow walls.
- Thickness of the hollow wall 5 to 30 mm.
- Diameter of drilled holes 68 mm.
- Or installations into multiple frames.

Complies with standards: STN EN 60670-1
 Material: PP - self-extinguishing 30 s
 Nominal insulation voltage: 400 V~
 Glow wire test: 850 °C
 Installation on the surface of class (SK): materials A1 to E
 Operating temperature: -25 °C to +60 °C

400214

Ord. No. (Type)	Diameter (mm)	Depth (mm)	Inlet openings	Colour	Pkg. (pcs.)	Dimensions (mm)				
						A	B/E	C	D	D1
400214 (KUP 68 LP/4 SK)	286	45	8 x ø 21/12 4 x ø 12 6 x ø 21 12 x (10 x 18)	grey	30	286	60	45	73	68

Universal box for hollow walls, fivefold

- Thickness of the hollow wall 5 to 30 mm.
- Diameter of drilled holes 68 mm.
- Or installations into multiple frames.

Complies with standards: STN EN 60670-1
 Material: PP - self-extinguishing 30 s
 Nominal insulation voltage: 400 V~
 Glow wire test: 850 °C
 Installation on the surface of class (SK): materials A1 to E
 Operating temperature: -25 °C to +60 °C

400215

Ord. No. (Type)	Diameter (mm)	Depth (mm)	Inlet openings	Colour	Pkg. (pcs.)	Dimensions (mm)				
						A	B/E	C	D	D1

Junction boxes with elastic cut-off glands 45 x 90 mm

- Elastic cut-off glands.
- Snap-on lid.
- Adjusting elements allow easy in-line linking of boxes.
- A comprehensive range of "soft" branch boxes in three sizes with the function of in-line linking into assemblies.
- Holes for drained water can be cut off.

Complies with standards: STN EN 60670-1
 Degree of protection: IP54
 Material: PP-lid, PE - box
 Nominal insulation voltage: 400 V~
 Glow wire test: 650 °C
 Installation on the surface of class (SK): material A1
 Temperature: (STN EN 60670-1) -5 °C to +60 °C

400300

Ord. No. (Type)	Dimensions B x C x D (mm)	Sealing range (mm)	Inlet openings	Colour	Pkg. (pcs.)	Dimensions (mm)

S-BOX Mini installation box with elastic cut-off glands

- Snap-on lid reduces box opening time by 90 %.
- Protection class II.
- Grey colour.

Complies with standards: STN EN 60670-1
 Degree of protection: IP44
 Mechanical resistance: IK08
 Material: ABS
 Nominal insulation voltage: 400 V~
 Glow wire test: 650 °C
 Installation on the surface of class (SK): material A1
 Operating temperature: -25 °C to +60 °C

400310

Ord. No. (Type)	Dimensions A x B x C (mm)	Elastic cut-off glands	Colour	Pkg. (pcs.)
400310 (S-Box 036)	80 x 40 x 80	6 x Pg 13,5 (ø 20,5 mm)	grey	150

S-BOX installation boxes with elastic cut-off glands

- Elements for attaching of electrical devices directly to the bottom of the box or using a DIN rail.
- 2 sets of mounting holes (inside/outside of the protected area) to be fixed up to two ways to the wall or the surface.
- Zinced screws with combi head.
- Protection class II.

Complies with standards: STN EN 60670-1
 Degree of protection: IP55
 Mechanical resistance: IK08
 Material: ABS
 Nominal insulation voltage: 400 V~
 Glow wire test: 650 °C
 Installation on the surface of class (SK): material A1
 Operating temperature: -25 °C to +60 °C

400351

S-BOX installation boxes with plain walls (without glands)

- Elements for attaching of electrical devices directly to the bottom of the box or using a DIN rail.
- 2 sets of mounting holes (inside/outside of the protected area) to be fixed up to two ways to the wall or the surface.
- Zinced screws with combi head.
- Protection class II.

Complies with standards: STN EN 60670-1
 Degree of protection: IP66
 Degree of protection: IP56 (Ord. No. 400366, 400367)
 Mechanical resistance: IK08
 Material: ABS
 Nominal insulation voltage: 400 V~
 Glow wire test: 650 °C
 Installation on the surface of class (SK): material A1
 Operating temperature: -25 °C to +60 °C

Junction box with proven functionality in fire 105 x 105 mm

- Ceramic terminal blocks mounted on a metal carrier.
- The mounting of the box is done from inside through 2 holes in the carrier. Under the carrier are 2 metal spacer rollers, whose one end rests on the carrier bottom and the other end touches the wall or ceiling.
- Zinc plated screws with combi head.

Complies with standards:	STN 92 0205, class PS 90 ČSN 73 0895, class P 90-R DIN 4102-12, class E 90
Degree of protection:	IP55
Mechanical resistance:	IK08
Material:	PA - Halogen-free
Nominal insulation voltage:	400 V~
Glow wire test: Installation on the surface of class (SK):	850 °C material A1
Operating temperature:	-25 °C to +60 °C

Ord. No. (Type)	Dimensions A x B x C (mm)	Elastic cut-off glands	Cross section (mm ²)	Ceramic terminal block	Mounting holes	Colour	Pkg. (pcs.)
400402 (PO 105 3P/4)	104,6 x 58,5 x 104,6	6 x Pg 21 (ø 29 mm)	4	3-pole	2 x ø 6,4 mm, spacing 60 x 60 mm	orange	12

Junction boxes Lava Line

- For flush mounting.
- Breakout holes on the sides and bottom of the box.

Degree of protection:	IP40
Material:	PS
Glow wire test:	650 °C
Nominal insulation voltage:	500 V~
Installation on the surface of class (SK):	material A1
Operating temperature:	-25 °C to +60 °C

Pg industrial lamellar glands

- IP68 - tested on permanent immersion into depth of 1 m.
- They provide the dedicated sealing of the cable as well as its mechanical fastening.
- Colour grey.
- The seal is made of halogen-free plastic.
- Lamellar design ensures anti-vibration functionality.

Complies with standards: STN EN 62444
 Degree of protection: IP66 without washer, IP68 with sealing washer
 Material: PA-self-extinguishing 30 s
 Glow wire test: 850 °C
 Operating temperature: -20 °C to +80 °C

- Side by side linkable.
- Max. power side/axial 45N/45N.
- Resistance to impact - 2 J - medium.

401050

Complies with standards: STN EN 61914
 Material: PA - self-extinguishing 30 s
 Glow wire test: 850 °C
 Operating temperature: -25 °C to +85 °C

Ord. No. (Type)	Cable diameter (mm)	Dimensions A x B x C (mm)	Oval hole D (mm)	Pkg. (pcs.)
401050 (6700-00/P)	8 - 17	32 x 22 x 12,5	4 x 5,5*	200
401051 (6701-00/P)	17 - 25	44 x 32 x 15	4 x 5,5*	300

* Oval opening for the screw Ø 4 mm.

1-pole 3x (1-4) mm² insulated terminals for boxes

- For connecting of several stripped conductors.
- Oval opening for the screw Ø 4 mm.

Complies with standards: STN EN 60947-7-1
 Degree of protection: IP10
 Material: PA- self-extinguishing 30 s
 Glow wire test: 850 °C
 Nominal insulation voltage: 400 V~,
 Operating temperature: -25 °C to +60 °C

401060

Ord. No. (Type)	Rigid conductor cross section (mm ²)	Dimensions A x D x D1 (mm)	Stripped wire (mm)	Pkg. (pcs.)
401060 (6100-04)	3 x (1 - 2,5)	20,5 x 14 x 13	14	500
401061 (6100-15)	3 x (1 - 4)	25 x 18 x 14,5	16	250

1-pole 3x (6-16) mm² insulated terminals for boxes

- Allows insertion of the main wire without its interruption.

Complies with standards: STN EN 60947-7-1
 Degree of protection: IP10
 Material: PA- self-extinguishing 30 s
 Glow wire test: 850 °C
 Nominal insulation voltage: 400 V~,
 Operating temperature: -25 °C to +60 °C

401070

Ord. No. (Type)	Rigid conductor cross section (mm ²)	Stripped wire (mm)	Pkg. (pcs.)	Dimensions (mm)	
				A	B
401070 (6100-44)	3 x (6 - 16)	17	170	19	35

Dowels

- For fixing of screws into various material types.

Material: PE
Operating temperature: -25 °C to +60 °C

401080

Ord. No. (Type)	Diameter hole (mm)	Diameter screw (mm)	Length screw (mm)	A (mm)	Pkg. (pcs.)
401080 (H 6)	6	2 - 4	15 - 30	30	200
401081 (H 8)	8	3 - 5	20 - 40	40	200

401083 (H 12)	12	4 - 8	40 - 60	60	100

Cable ties - natural, black - UV

- Natural - resistant to oils, petrol, salt water and solvents.
- Black - UV resistant, suitable for outdoor use.

Material: PA 6,6 - halogen-free
Operating temperature: -40 °C to +85 °C

CONTENTS

Terminal components	160
Cable lugs - tubular	164
Cable lugs, crimping pliers, cable connectors	165
Cable lugs - crimping	166
Bolt-on cable lugs, cupal washers, terminal pins	167
Insulated cable connectors, flat female, male	168
Insulated flat male, female and fork terminals	169
Insulated cable lugs and cable sleeves	170
Insulated cable sleeves and pin terminals	171
Multipole flat male and female terminals and insulator	172
Bolt-on flat male and double male terminals	173
Multipole flat male and female terminals, multipole palstic sockets and plugs	174
Multipole plastic sockets and plugs combined	175

A long term development of this assortment in SEZ DK a.s. guarantees compliance with all the relevant technical standards. Our terminal components are manufactured from high quality brass and copper raw materials and are specially surface treated to provide the lowest transient resistance and maximum protection against corrosion, long-lasting and reliable operation.

We offer following production groups within our portfolio of terminal components for crimping and connecting of copper wires and cables::

- Crimping cable lugs and tubular lugs
- Bolt-on cable lugs, cupal (Cu-Al) washers, insulated pin terminals
- Insulated cable connectors, flat female, male and fork terminals
- Flat female and male terminals (fastons) without insulation
- Bolt-on flat male and double male terminals
- Multipole flat male and female terminals, multipole sockets and plugs

AREA OF APPLICATION:

- Instruments / Controls
- Lighting
- Power supplies
- Distribution assemblies and switchgears
- Distribution
- Lifting equipments
- Electric motors
- Machinery and equipment

Crimping cable lugs – tubular

- Application: for flexible Cu conductors.
- They are manufactured from galvanically tinned electrolytically clean copper plate. They are provided with a closed circular profile conductor bed designed to be pressed and permanently attached to both rigid and flexible copper conductors.

500000

Complies with standards: EN IEC 61238-1-1, 61238-1-3
Material: Copper
Surface treatment: Tinning

TERMINAL COMPONENTS

Bolt-on cable lugs, CupAl washers, terminal pins

CONNECTING ENERGY

Bolt-on cable lugs

- Application: for rigid and flexible Cu conductors.
- Types 500120 to 500122 contain 2-screws, the other 4-screws.

Complies with standards: STN 37 1347, STN 37 1340,
EN IEC 61238-1-1, 61238-1-3
Material: Copper, steel
Surface treatment: Tinning

500120 - 500122

500123 - 500127

Ord. No. (Type)	Current (A)	Cross section (mm ²)	Bolt	Pkg. (pcs.)	Dimensions (mm)					
					J	C	d1	d2	D	M
500120 (7580-07)	117	16	M6	25	25	20,5	5,3	6,4	11	2,5

CupAl washers

- Serves as intermediary segment in the connection of terminal components (Cu+Al) made from different materials.

Material: Copper, aluminium

500141

Ord. No. (Type)	Outer diameter D (mm)	Internal diameter d (mm)	Thickness M (mm)	Pkg. (pcs.)
500141 (7373-03/100)	10,5	4,0	1	100
500142 (7373-05/100)	12,5	5,0	1	100

500803 (7400-06/100)	10		4,8	4,3	14,5	23,5
500804 (7400-07/100)	16	100	5,9	5,5	18,0	28,0

Cable connectors insulated

- Application: for flexible Cu conductors.

Complies with standards: EN IEC 61238-1-1
Material: Copper
Surface treatment: Tinning
PVC insul. temp. stability: -10 °C to +75 °C

Ord. No. (Type)	Insulation colour	Cross section (mm ²)	Pkg. (pcs.)	Dimensions (mm)		
				D	d	l
501000 (LKS-1,5 IZR)	red	0,5 - 1,5	100	4,1	1,7	26
501001 (LKS-2,5 IZB)	blue	1,5 - 2,5		4,5	2,3	26
501002 (LKS-6 IZG)	yellow	4 - 6		6,5	3,6	26

Flat female terminals insulated

- Application: for flexible Cu conductors.
- Flat female terminals are designed with an extra metal ring under the insulation (double crimp).
- Terminal components specially finished surface for the lowest transient resistances and the maximum protection against corrosion.

Complies with standards: EN IEC 61238-1-1 DIN 46245
Material: Copper
Surface treatment: Tinning
PVC insul. temp. stability: -10 °C to +75 °C

Ord. No. (Type)	Insulation colour	Cross section (mm ²)	Nominal size (mm)	Pkg. (pcs.)	Dimensions (mm)

501021 (7912-15FG)			9,5 x 1,2		29,0	12,0

Flat female terminals fully insulated

- Application: for flexible Cu conductors.
- Flat female terminals are designed with an extra metal ring under the insulation (double crimp).
- Terminal components specially finished surface for the lowest transient resistances and the maximum protection against corrosion.

Complies with standards: EN IEC 61238-1-1
Material: Copper
Surface treatment: Tinning
PVC insul. temp. stability: -10 °C to +75 °C

Ord. No. (Type)	Insulation colour	Cross section (mm ²)	Nominal size (mm)	Pkg. (pcs.)	Dimensions (mm)

Insulated twin cable sleeves

• Application: for flexible Cu conductors.

Complies with standards: EN IEC 61238-1-1, DIN 46228
Material: Copper
Surface treatment: Tinning
PVC or PP insul. temp. stability: -20 °C to +105 °C

Flat female terminals

- Terminal components specially finished surface for the lowest transient resistances and the maximum protection against corrosion.
- The recommended length of the bared end of the conductor is 6 mm for the conductors of 0,5 ÷ 2,5 mm² cross sections and 7 mm for larger cross sections.

Complies with standards: STN EN 61210, DIN 46247
Protection: IP20 with slide insulators
Material: Brass
Ambient temperature: +85 °C

TERMINAL COMPONENTS

Multipole flat male and female terminals, multipole plastic sockets and plugs

CONNECTING ENERGY

Female terminals

- Through a special protruded cleat which locks with insulating bodies they create one unit-Multipole insulated plug or socket.
- Terminal components specially finished surface for the lowest transient resistances and the maximum protection against corrosion.
- The recommended length of the bared end of the conductor is 6 mm for the conductors of 0,5 ÷ 2,5 mm².

500260

500261

Complies with standards:	STN EN 61210, DIN 46340
Protection:	IP20 with slide insulators
Material:	Brass
Ambient temperature:	+85 °C

Ord. No. (Type)	Surface treatment	Current (A)	Cross section (mm ²)	Nominal size (mm)	Pkg. (pcs.)	Dimensions (mm)				
						l1	l2	l3	a1	a2
500260 (7122-01/100)	Passivation	4 - 7,5	0,5 - 1	6,3 x 0,8	100	19	7,4	7	8,5	4,5

500283 (7232-13/100)	Tinning								

Multipole plastic sockets secured

- The design of both sockets and plugs prevents them from twisting and wrong insertion of socket into plug.
- The terminals are inserted into the insulation bodies after they have been pressed on the conductor.

500441

Material:	Thermoplast
Ambient temperature:	-25 °C to +85 °C

Ord. No. (Type)	Number of poles	Nominal size (mm)	Pkg. (pcs.)	Dimensions (mm)
